0xf0fcc2f1fc8fa49dbb8b0dc7f5b5e78f8c098cea8cf78dbdce48a88e9 The output value to this key generator is not guaranteed to produce a valid AES key at random, and might appear to be a random generator as well (assuming you have a good random number generator/modelled on real one). So, we'll use a sample from Key Generator, which comes with its own key. This will provide for a more reliable key value.

$s = (1E3 * r \& t) + (5E + e * b * a) + a * 8 + x + b + c + d + e + f$ We are going to use this formula as an index for the size of the key-seed. This is done by multiplying the values by 464, making the result 13 bytes. Then we make a 16 byte hash in C from this string.. Note: We recommend running a custom program as part of this test. However, you should be able to generate an 8-character hexadecimal string from any input, including the standard format.
